VULCANO **155mm AMMUNITION FAMILY**

The VULCANO family of ammunition has been designed to meet the present and future requirements of Artillery Regiments and Rapid Reaction Forces to fire with high precision and at long ranges 155 mm ammunition.

VULCANO is a family of subcaliber ammunition composed of a Extended Range ballistic version (ER) and a Long Range guided version(LR) for 155/52 and 155/39 land artillery howitzers.

Two ammunition configurations are available:

- unguided multirole extended range configuration with multifunctional programmable proximity fuze;
- autonomous IMU / GPS ammunition for Long Range precise bombardment.

VULCANO is a new concept projectile based on a fin stabilized airframe with canard control actuation system for navigation and terminal guidance.
